

Nowcasting with LAPS

Zoltan Toth (NOAA/OAR/ESRL/GSD, Boulder, CO)

This presentation will review recent changes to and results from the Local Analysis and Prediction System (LAPS), the status of transitioning LAPS capabilities from AWIPS-I to AWIPS-II, and a proposed new paradigm for the use of LAPS in NWS nowcasting activities. In particular we will discuss the collaborative LAPS development and application project in VLab and various NOAA Testbeds related to a future NWS nowcasting system.
