

Weather Archive and Visualization Environment (WAVE) Demo

Bill Rasch (NOAA/NWS/WR/STO, Sacramento, CA)

We will demo the functionality of WAVE with pre-made content but also a live demo. We will demonstrate how the WAVE is useful for SOOs and operational staff. WAVE content is very useful for SOO for training content but also to look at numerous datasets (including experimental) to provide feedback to model developers for R2O. It is also a great DSS content making tool for operational forecasters.
