

## **Using the Ensemble Situational Awareness Table: How I Learned to Stop Worrying and Love the Global Ensembles**

Trevor Alcott (NOAA/National Weather Service, Western Region Headquarters, Salt Lake City, UT)

National Weather Service Western Region and the Salt Lake City forecast office have developed a tool for identifying significant synoptic features in the NAEFS ensemble forecast. Through implementation of a new user interface, and application of recent verification statistics, we demonstrate the potential for using a multi-model ensemble to improve forecast confidence leading up to high-impact weather events.
