

FY19 AWIPS Proficiency Test Task List Review

Before taking the AWIPS Proficiency Test, you should be able to:

1. Display text products in a text display window (e.g., radar Free Text Message)
2. Load and manipulate single elevation radar products
3. Save/load an Editor Display and rename tabs
4. Load multiple editors in CAVE and save as a Perspective Display
5. Configure looping properties
6. Load and manipulate all-tilts radar products
7. Load and manipulate products in a 4-panel display
8. Enter and navigate Panel Combo Rotate (PCR) mode
9. Use All Panel Sampling in PCR mode
10. Load MRMS products and use the AWIPS Interactive Reference to access the VLab MRMS Products Guides.
11. Load two image products on the same display panel with and without image combination selected
12. Blink and stop blinking a range of values for a given product
13. Change the color table for a given product and use the color table editor to filter the display
14. Change the storm motion value used to determine the SRM product
15. Display and use the VR shear tool
16. Use the Time of Arrival tool
17. Set the Cursor Home tool for a specified location
18. Load, manipulate and unload maps
19. Load products in specific orders, set the time match basis, and move layers up and down
20. Create, edit, and open procedures
21. Use the Feature Following Zoom (FFZ) tool
22. Open and manipulate the Four-Dimensional Stormcell Investigator (FSI) tool
23. Load and manipulate the pop-up Skew-T
24. Load and sample the Std Env Data Packages
25. Load and manipulate NSHARP
26. Load and manipulate the FFMP Basin Table
27. Load and manipulate the SCAN Cell/Site Storm Threat Table
28. Manipulate the WARNGEN Graphical User Interface (GUI)
29. Load and interpret the AWIPS Data Monitor
30. Make and use One-Time Requests (OTRs)
31. Create, open, and remove Radar Multiple Requests (RMRs)
